Grade 4
Strand: Number

	Curriculum Expectations	Pages
N4.1	Demonstrate an understanding of whole numbers to 10 000 (pictorially, physically, orally, in writing, and symbolically) by: - representing - describing - comparing two numbers - ordering three or more numbers.	5-34
N4.2	Demonstrate an understanding of addition of whole numbers with answers to 10 000 and their corresponding subtractions (limited to 3 and 4- digit numerals) by: - using personal strategies for adding and subtracting - estimating sums and differences - solving problems involving addition and subtraction	37-88
N4.3	Demonstrate an understanding of multiplication of whole numbers (limited to numbers less than or equal to 10) by: - applying mental mathematics strategies - explaining the results of multiplying by 0 and 1	92-130
N4.4	Demonstrate an understanding of multiplication (2- or 3-digit by 1- digit) by:	
N4.5	- relating division to multiplication.	
N4.6	Demonstrate an understanding of fractions less than or equal to one by using concrete and pictorial representations to: - name and record fractions for the parts of a whole or a set - compare and order fractions - model and explain that for different wholes, two identical fractions may not represent the same quantity - provide examples of where fractions are used.	178-209
N4.7	Demonstrate an understanding of decimal numbers in tenths and hundredths (pictorially, orally, in writing, and symbolically) by: - describing - representing - relating to fractions.	212-234
N4.8	Demonstrate an understanding of addition and subtraction of decimals limited to hundredths (concretely, pictorially, and symbolically) by: - using compatible numbers - estimating sums and differences - using mental math strategies - solving problems	237-273
TQ4	Assessment - Tests and Quizzes	26 – 27, 89 – 91, 176 – 177, 235 – 236, 273 – 275

Activity – Number Line Leap Frog

Objective What are we learning about?

To help students understand and practice ordering whole numbers up to 10,000 by placing them correctly on a number line.

Materials What you will need for the activity.

- A [illegible] paper to create a number line
- Ma[illegible] or cr[illegible]
- Small stick[illegible]
- Index cards [illegible]us nu[illegible] to 10,000 written on them

Instructions How you [illegible]ple[illegible]ity

1. Lay out the roll of paper on the flo[illegible]e clas[illegible]nd draw a long number line across it. Mark the number line at e[illegible] interva[illegible]h m[illegible]s of 1,000 up to 10,000 to provide a reference for students.
2. Give each student an index card with a numbe[illegible] i[illegible]n[illegible] their number on a sticky note as well.
3. Have students come up one at a time to the number lin[illegible] th[illegible]
4. The student must decide where on the number line their numb[illegible]d place their sticky note on the line accordingly.
5. Once a student places their sticky note, the rest of the class can agree or disagree. If there is a disagreement, the student must justify their placement to their peers.
6. After all the students have placed their numbers, review the sequence as a class and make any necessary adjustments together.
7. For the final challenge, shuffle the sticky notes and have the students place them in the correct order as quickly as possible.
8. Ask students to answer these questions: "Which number did you have? Why did you place it where you did? What did you notice about the numbers to your left and right?".

Activity – The Multiplication Magic Show

Objective

What are we learning about?

To deepen students' understanding of the concepts behind multiplying by 0 and 1 through an engaging and interactive 'magic' show, where students not only learn but also perform 'magic tricks'.

Materials

What you will need for the activity.

- Magic wands (pencils, sticks or even pencils).
- Multiplication flashcards featuring problems that result in multiplying by 0 and 1.
- A 'magic' hat to hold the flashcards.
- A large whiteboard or chalkboard to write down and explain the multiplication problems.
- Small rewards or stickers for students who successfully perform their 'magic'.

PREVIEW

Instructions

How you will complete the activity.

1. Begin the show by explaining that today's magic is about the special powers of multiplying by 0 and 1.
2. Each student takes turns being the magician. They draw a flashcard from the magic hat and present the multiplication problem to the class.
3. Before revealing the answer, the student magician explains the 'magic' behind multiplying by 0 or 1 (e.g., "Anything multiplied by 1 remains the same! It's like magic!").
4. The magician then reveals the answer, demonstrating the 'magic' of multiplication.
5. The class can then discuss why this 'magic' happens, reinforcing the concept with examples.
6. Every student magician gets a small reward or sticker for their performance.
7. Conclude the magic show with a discussion and recap of what was learned about multiplying by 0 and 1.

Same Numerator/Different Denominator

If fractions have the same numerator, they have the same number of equal parts. If the denominator is different, the fractions have a different number of total parts. Check out the pizzas below that have the same numerators but different denominators.

$\frac{4}{8}$

The whole pizza is cut into 8 pieces. 4 slices have been shaded in.

$\frac{4}{6}$

The whole pizza is cut into 6 pieces. 4 slices have been shaded in.

If you w[illegible] would rather have 4/6 slices of pizza, than 4/8. Therefore, 4/6 is bigge[illegible] ple, the whole is the same size. This means the pizza is the same siz[illegible] We can[illegible] ractions that have the same numerator if the whole is the same size.

Instructions How to… …activity

1) Print off the number line on… ne…
2) Divide into Groups: Organize the cl… into sma… …up… …h consisting of eight students.
3) Distribute Fraction Cards: Give each group a se… …of… …Cards… …clude fractions between 0 and 1.
4) Individual Fraction Selection: Each student in the group selects… …from their set.
5) Place Fractions on Number Line: All students simultaneously place their chosen fraction card at the appropriate spot on their group's number line between 0 and 1. Encourage discussion within groups to reach a consensus on the placement.
6) Group Review: Once all cards are placed, each group takes turns presenting their number line to the class, explaining their reasoning for the placement of each fraction.
7) Class Consolidation: After each group has presented, conduct a whole-class activity. Draw a new, large number line and have each group place their fraction cards on this communal line in the same order as in their group activity. This allows for comparison and further discussion of the different fractions and their relative sizes.

Place Value Using Decimals

Decimal numbers are any numbers that represent a value less than one. We use a decimal point to represent that a number can be less than one. We would represent a single cookie with the number 1. We can still represent half a cookie by writing 0.5. The 0 is the whole number, while the numbers to the right of the decimal show how large the part of the whole is.

Math Activity Title: Pathway to Patterns

Objective What are we learning about?

To help students understand and create increasing addition number patterns using a simple and engaging method that involves visual aids and hands-on interaction.

Materials What you will need for the activity.

- C... small objects (like beans or beads)
- Gr... er
- Penc...
- Rulers

Instructions How y... mple... ctivity

1. Start with a discussion abo... hat ... atterns are, explaining that they involve adding the same amount t... revio... er to get the next number.
2. Hand out grid paper and colored counters t... stude...
3. Ask students to choose a starting number an... ld write these at the top of their grid paper.
4. Students place a counter on the grid to represent their s... ing ... t in the first box at the bottom of the grid paper.
5. Students then add their chosen increment to the starting number, pl... another counter to represent the new number in the next box up on the grid.
6. Continue this process, adding the increment each time and moving up the grid, placing a counter for each new number, until they reach the top of the grid or a set limit.
7. Once their pattern is complete, students use their pencils and rulers to draw a line connecting the counters, creating a visual "path" of their number pattern.
8. Encourage students to write out their complete number sequence below the grid.
9. Have students present their patterns to the class, explaining their choice of starting number and increment.

Task Cards: Patterning – All Operations

Objective	What are we learning about?

To recognize and create patterns using the four basic mathematical operations.

Materials	What you will need for the activity.

- 24 t
- S er for answers
- Pe

PREVIEW

Instructions	ou wi the activity

1. Introduce the concept o s in perations and their relevance to problem-solving in everyda e.
2. Organize the students into pairs an ovide e ir sets of task cards.
3. Give each pair an answer recording sheet t do ses.
4. Encourage teamwork by having students collabora ir p on finding solutions.
5. Allow students to select any task card to begin with, emphasiz n complete the cards in any order they prefer.
6. Instruct students to record the letter of their chosen answer (A, B, or C) on their answer sheet beside the task card's number.
7. Consider using a timer to create a dynamic challenge, adjusting the duration to fit the lesson's objectives and complexity.
8. After the activity, review the answers collectively, discussing any challenging patterns and strategies used to solve them.
9. Have students reflect on the activity, sharing the methods they applied and obstacles they overcame.

Word Problems: Balancing Addition Equations

Questions | Solve the word problems below

	Word Problems - Balancing Addition Equations	Answers
1	An aquarium has *x* fish. After 2 new fish are added, there are 9 fish swimming in the tank. What was the original number of fish?	
2	has ma klace with *x* beads, then adds 5 more beads and has be . How many beads were on Thomas's necklace?	
3	Oliver has *x* pencils i se d 3 pencils from his friend, and now he has 1 pen ncils were in Oliver's case to begin with?	
4	Clara bakes *x* cookies, then bakes 7 more ar cooki total. How many cookies did Clara bake first?	
5	Sam has a bag with *x* marbles. He finds 4 more marbles, and now he has 13 marbles altogether. How many marbles were in the bag initially?	
6	Leah has *x* stickers. Her friend gives her 7 stickers, and now Leah has 20 stickers. How many stickers did Leah start with?

Activity – Mystery Number Challenge

Objective What are we learning about?

To help students understand how to use symbols to represent unknown values in equations, enhancing their problem-solving skills by writing equations that correspond to given problems.

$X+10=25$

Materials What you will need for the activity.

- Small whiteboards or sheets of paper
- Dry erase markers or pens
- Set of simple word problems printed on cards
- Tokens or stickers

Instructions How you will implement the activity

1. Distribute a sheet of paper and a pencil to each student.
2. Hand out a card with a simple word problem to each student. Each problem should involve a basic arithmetic operation (addition or subtraction) and include a blank space or a placeholder for an unknown value, like "Sam has some apples. He gets 5 more apples and now he has 8. How many did he start with?"
3. Ask the students to read their problem and think about what the unknown value is.
4. Instruct the students to write an equation on their paper using a symbol (like x or a blank line) to represent the unknown value.
5. Once they have written their equation, students should come up to the front of the class one by one to present their equation and explain their thinking process in determining how to set up their equation.
6. Give feedback on each equation, discussing as a class whether the equation makes sense and if it accurately represents the word problem.
7. Award tokens or stickers for correctly written equations and good explanations.

Word Problems – Writing Addition Equations

Questions | Answer the questions below

1) Steve and James love video games. Steve has 8 games. Steve and James have 18 games in total. Which equation will tell us how many games James has?

j + 8 = 18	8 + 18 = j
8 + j = 18	8 – j = 18

2) Je[illegible]king cookies. Rebecca made 20 cookies. They made 50 total co[illegible]es. Wh[illegible]n will tell us how many cookies Jen made?

[illegible] + 20 =	50 + c = 20
[illegible]	c – 20 = 50

3) Scott and Luke love hockey cards. [illegible] and Luke has 50 cards. Which equation will tell us how many [illegible] cards [illegible] have?

c + 25 = 50	25 [illegible]
25 + c = 50	[illegible]

4) Adam and Henry went Trick or Treating. Henry got 62 candie[illegible] candies in total? Which equation will tell us how many candies [illegible]am

62 + c = 121	62 + 121 = c
c + 62 = 121	62 – c = 121

5) Sam scored 15 points in his basketball game. He had 5 points in the first half. Which equation will tell us how many points he had in the second half?

p + 5 = 15	5 + 15 = p
5 – p = 15	5 + p = 15

Math Activity Title: Algebraic Bottle Flip Challenge

Objective What are we learning about?

To practice and reinforce understanding of basic one-step subtraction algebra problems through the engaging and physically active bottle flip game.

Materials What you will need for the activity.

- Pla[illegible]bottles [illegible]air/group) filled to approximately one-third with water (or use cu[illegible]
- Set of subt[illegible]gebra[illegible]cards
- Answer sheet [illegible]h g[illegible]

Instructions How you w[illegible]ple[illegible]

1. Start with a short lesson on one-st[illegible] subtra[illegible]alg[illegible]roblems, using examples like x – 3 = 4.
2. Arrange the students into pairs or small gr[illegible]an[illegible]ttle and a set of question cards to each.
3. Each pair or group receives an answer sheet to re[illegible]a[illegible]
4. Explain the rules: One student draws a question card a[illegible]trie[illegible] subtraction algebra problem.
5. Once they believe they have the correct answer, they write it down[illegible]r answer sheet.
6. The student then gets to attempt a bottle flip. A successful flip means they can move on to the next question; an unsuccessful flip means they need to try to solve another question card before flipping again.
7. Alternate turns within each group or pair until they have completed all the question cards.
8. Groups or pairs tally their successful flips and compare with the rest of the class to determine the winning team.
9. Go through the answer sheet with the class to ensure understanding and correct any misconceptions.
10. Discuss the strategies used to solve the subtraction problems and how this type of algebra is used in real-life situations.

Multiplication – Find the Variable

When we multiply a number by a variable, we do not need to use the multiplication sign. It is known that any variable next to a number means the operation we are using is multiplication.

Example: 5n = 15 means 5 x n = 15

We can figure out the unknown number by balancing the equation: n = 3.

Solve Equations – Guess and Check

When we are trying to figure out the value of a variable, we can use the guess and check method. First, we make a reasonable guess as to what the value of the variable could be. Second, we solve the equation using this guess. If our answer is too high, then we use a smaller number. If it is too low, we choose a lower number.

Questions Find the value of the variable using the guess and check method

#	Equation	Guess	Calculate	Answer
Ex	$3n = 21$	6 7	~~3 x 6 = 18 (too low)~~ 3 x 7 = 21 (right on)	7
1	$4m = 32$			
2	$3 + w = 17$			
3	$33 = b + 17$			
4	$2 \times m + 1 = 19$			
5	$19 = 3 \times L - 2$

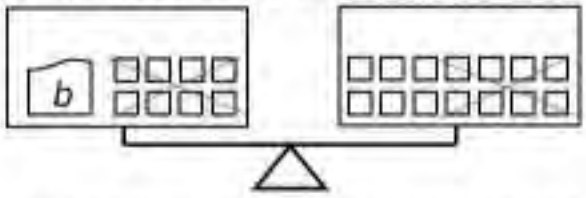
P4.2

Solve Equations – Balance Model

When we are trying to figure out the value of a variable, we can use a balance scale. Whatever we do to one side of the balance, we need to do the same to the other side.



Example $b + 8 = 14$

We can figure out the value of b by isolating it. This means we want b to be on its own. If we take the 8 ones away from the left side, we need to take 8 away from the right side as well, this will leave us with b = 6.

PREVIEW

Question: Find the value of the variable using the balance model

#	Equation	Balance Model	Answer
1	$7 + m = 18$		
2	$2 + t = 16$		
3	$15 = 2 + b + 6$		
4	$4 + n + 1 = 22$		

© Super Simple Sheets

Name: _____ 146

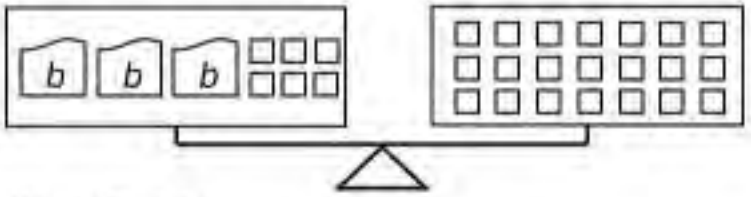
P4.2

Solve Equations – Balance Model

When an equation has multiplication, we can still use the balance model. Check out the example below.



Example $3b + 6 = 21$

There are three groups of the variable *b*. To isolate the variable:

1) We ne[illegible] to subtract the 6 from the left side.
2) Next, [illegible] need to subtract the 6 from the right side. Our equation can now be r[illegible] as 3b = 15.
3) W[illegible] variable b by itself. Since division is the opposite as [illegible]plicatio[illegible] divide the 3b by 3 to isolate it.
4) Wha[illegible] we d[illegible]e, w[illegible] need to do to the other. Therefore, we need to divide th[illegible] righ[illegible] 3. In the end, we get b = 5.

PREVIEW

Questions

[illegible]lue o[illegible]riable using the balance model

#	Equation	[illegible]del	Answer

Solve Equations Using Number Sense/Reasoning

For some mathematicians, solving equations might not require the guess and check method or the drawing of a balance model. Instead, some are able to use their number sense and reasoning skills to solve the problem.

Example:
25 + 5a = 50
~~25~~ + 5a = 50 - 25
5a = 25
5a ÷ 5 = 25 ÷ 5
a = 5

Question Use the reasoning above to solve the equations below.

PREVIEW

Telling Time – Digital Clocks

A **digital clock** tells us what time it is using numbers. The first number before the colon tells us what hour it is. The second set of numbers tells us how many minutes have passed the hour.

Examples

7:20

Hour = 7 Minutes = 20

2:47

Hour = 2 Minutes = 47

PREVIEW

Part 1 Fill in the answers below – Hours and Minutes

1) _____

Hour = _____ Minutes = _____

2) **1:58**

Hour = _____ Minutes = _____

3) **9:28**

Hour = _____ Minutes = _____

4) **4:37**

Hour = _____ Minutes = _____

5) **11:42**

Hour = _____ Minutes = _____

6) _____

Hour = _____ Minutes = _____

Part 2 Fill in the answers below – Hours, Minutes and

Example **10:24:18** Hour = 10 Minutes = 24 Seconds = 18

1) **3:17:12**

Hour = _____ Minutes = _____ Seconds = _____

2) **12:43:35**

Hour = _____ Minutes = _____ Seconds = _____

3) **9:12:38**

Hour = _____ Minutes = _____ Seconds = _____

4) **5:23:02**

Hour = _____ Minutes = _____ Seconds = _____

Math Activity: Time Travelers

Objective What are we learning about?

To help students learn to read analog clocks and calculate elapsed time between two events.

Materials What you will need for the activity.

- P[illegible]
- Ma[illegible]s
- Scissors
- Brass paper[illegible]rs
- Worksheets wi[illegible]ck[illegible]ios

Instructions How you will [illegible]mpl[illegible]

1. Distribute one paper plate to each stude[illegible]se as [illegible]ck face.
2. Instruct students to write the numbers 1 th[illegible]riate places around the edge of the plate.
3. Have students cut out two arrows from paper — a lon[illegible] hand and a shorter one for the hour hand.
4. Show the students how to attach the clock hands to the center o[illegible]e plate using a brass paper fastener, making sure the hands can move freely.
5. Demonstrate how to set the clock to a specific time, then show changing the time to demonstrate elapsed time.
6. Provide each student with a worksheet that contains various times and ask them to set their paper clock to start at the first time and then move the hands to the second time.
7. Discuss as a class how to figure out how many hours and minutes have passed between the two times.

Matching Game: Telling Time To The Nearest Minute

Objective What are we learning about?

To help students practice telling time to the nearest minute by matching digital times to their analog counterparts.

PREVIEW

Materi ...ou will need for the activity.

- Pre-prep ...cu...tching game cards with digita... ...d ana... ...ks.
- Small bags or env... ...old t... ...sets for each group

Instructions How you will complete the ...

1. Before the class, the teacher will cut out the p... ...ed m... ...ng game cards.
2. Divide the students into small groups and give each group ... ...elope containing a set of the matching cards.
3. In their groups, students will spread out the cards face down on their table.
4. Each person takes a turn to try to match two cards – one digital time with its matching analog clock.
5. If they find a correct match, they keep the cards out and continue with their next turn. If the cards don't match, they turn them back over in the same place, and the next player takes a turn.
6. The activity continues until all pairs are correctly matched within each group.

Elapsed Time Using Fractions

We can use fractions to explain how much time has elapsed. When using fractions, we use one hour as the whole. For example, if an event took 3 hours and 30 minutes, we could say it took 3 ½ hours. If it took 2 hours and 20 minutes, we could say it took $2\frac{1}{3}$ hours.

Part 1 Write the fraction for the elapsed time

Elaps	Fraction
30 ...tes	...hour
15 minutes	
45 minutes	

Elapsed Time	Fraction
20 minutes	
40 minutes

Task Cards: Elapsed Time

Objective What are we learning about?

To enhance students' ability to calculate exact elapsed times to the minute and reinforce their understanding of time management and clock reading skills.

Materials What you will need for the activity.

- 24 t
- [illegible] for answers
- Pen

8-11h
16-18h

Instructions [illegible] the activity

1. Start by explaining the [illegible] calculation in daily activities and how it relates to real-life [illegible]
2. Distribute a set of 24 task cards to [illegible] pair of [illegible]
3. Provide each pair with a separate sheet of [illegible] for r[illegible] answers.
4. Instruct students to work in pairs to encourage c[illegible]n and [illegible]sion, which can help them learn from each other's reasoning.
5. Explain that they are not required to work through the task car[illegible]der. They can choose any card to start with and proceed at their ow[illegible]
6. Students should write down just the letter of their answer (A, B, or C) [illegible] the answer sheet next to the corresponding task card number.
7. If you're using a timer, set a time limit to add a level of challenge and help manage the activity period. This could be the length of the class or a shorter interval, depending on your goals.
8. Once the time is up, or all pairs have completed as many cards as they can, go over the answers as a class. This review helps solidify learning and address any common mistakes or misunderstandings.
9. Encourage pairs to discuss strategies they used and any difficulties they encountered during the activity.

Math Activity: Rectangle Rally

Objective — What are we learning about?

To help students understand and calculate the area of a rectangle through interactive and hands-on learning activities.

Materials — What you will need for the activity.

- Grid
- R
- C pencil
- Scissors
- Rectangul from t oom (e.g., books, tablets, small

Instructions — How you ple ty

1. Begin the activity by explaining th ula for a rectangle (Area = length x width).
2. Hand out sheets of grid paper and rulers to stu
3. Instruct students to draw rectangles of various siz rid using the rulers. Make sure each student draws at least three di re
4. Have students write down the dimensions (length and width) o next to their drawings.
5. Ask the students to calculate the area of each rectangle by counting the grid squares inside each rectangle and using the formula.
6. Once the grid calculations are done, distribute the rectangular objects around the classroom.
7. Allow students to measure the length and width of each object with their rulers, calculate the area, and record their findings.
8. Have students compare the areas they calculated for their drawings with the real objects' areas.
9. Discuss any differences or surprises in the measurements and calculations.

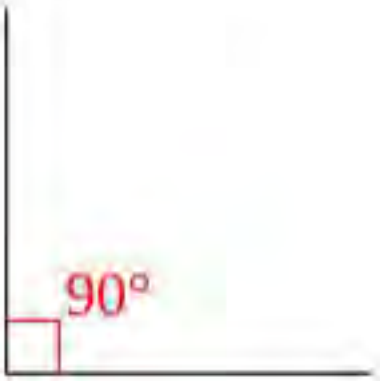
Math Activity: Right Angle Architects

Objective — What are we learning about?

To engage students in identifying right angles through the construction of paper structures, enhancing their understanding of right angles in a practical and creative context.

Materials — What you will need for the activity.

- C… pa… rdstock
- Sc… s
- Glue or ta…
- Coloured m… crayo…



Instructions — How y… mple… tivity

1. Begin by explaining what a right a… sing … s like the corners of a book or a door frame to illustrate.
2. Distribute construction paper or cardstoc… rs, a… ne to each student.
3. Challenge students to create a structure or sculptur… s a… ri… angles as possible. They can build houses, furniture, or abstract …
4. Encourage students to use their rulers to help fold and cut stra… t l… ich can help form right angles more accurately.
5. As students work, circulate and discuss their projects, asking them to point out where they have used right angles.
6. Once the structures are complete, allow students to use markers or crayons to decorate their creations, highlighting the corners and edges where right angles are present.
7. Arrange all the structures on a table or along a classroom shelf and conduct a gallery walk where students explain their structures and the right angles within them to the class.
8. Discuss how these angles contribute to the stability and aesthetics of their designs.

Math Activity: 3D Shape Builders

Objective

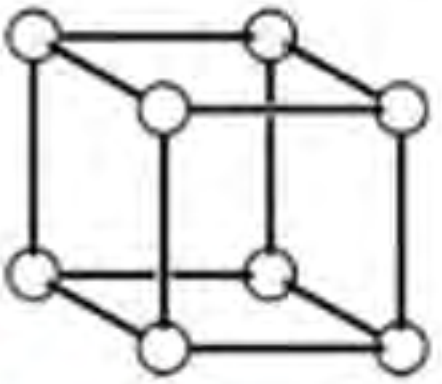
What are we learning about?

To help students recognize and understand the properties of three-dimensional shapes, specifically focusing on cubes, rectangular prisms, and triangular prisms.

Materials

What you will need for the activity.

- Pl[illegible]arshmallows
- [illegible]
- Con[illegible]uction
- Scissors
- Glue



PREVIEW

Instructions

How you[illegible]

1. Start the lesson by explaining wha[illegible]apes a[illegible]discussing the specific shapes you'll focus on: cubes, rectangular p[illegible]ms, and [illegible]gul[illegible]ms.
2. Show examples of each shape, either as ph[illegible]mo[illegible]es, and discuss their properties such as vertices, edges, and face[illegible]
3. Distribute playdough or clay and toothpicks to each stu[illegible]
4. Instruct students to use the playdough or clay to make vertices[illegible]ks to connect them as edges to form each of the three shapes.
5. After constructing the shapes with playdough and toothpicks, provide students with construction paper, scissors, and glue to make paper models of each shape.
6. Have students measure and cut the construction paper into the correct number of faces for each shape and then glue them together to form the 3D shapes.
7. Once all models are completed, students should label each part of their shapes (vertices, edges, and faces) on the paper models.
8. Display all shapes on a class table and discuss how the shapes are used in real-life contexts.

What is a Statistical Question?

When we ask a statistical question, we can collect data that answers that question.
A **statistical question** is a question that could have more than one answer.
A statistical question **is not** a question that has only one answer.
Statistical questions can have numbered answers or worded answers.

Not a Statistical Question	Statistical Questions
1) How m dogs do you have? (o answer)	1) How many dogs do the students in grade 4 have? (could have many different answers)
2) Wha colour?	2) What is the favourite colour of 4th graders? (could have many different answers)

Activity Title: Flip the Data

Objective

What are we learning about?

Students will engage in a fun and active game where they read data from a bar graph and answer questions to earn the opportunity to flip a bottle or cup. This activity combines data interpretation skills with a physical challenge, adding excitement and a competitive element to learning.

Materials

What you will need for the activity.

- B[illegible]or cups[illegible]g
- A sm[illegible]tboar[illegible]r t[illegible]isplay bar graphs
- Timer (sto[illegible] [illegible]martp[illegible]pp)
- Question card[illegible] on t[illegible] data
- Scoreboard to ke[illegible]

Instructions

How you wi[illegible]mp[illegible]

1. Divide the class into small teams, ideally of 5 [illegible]tude[illegible]h.
2. Prepare a series of bar graphs to display d[illegible]mart[illegible]with corresponding question cards that ask about t[illegible]g[illegible]
3. One team at a time comes to the front where the gr[illegible]play
4. Display the first bar graph on the smartboard.
5. The first student from the active team reads the graph and sel[illegible]card. Start the timer when the question is first shown.
6. The student answers the question based on the data presented in the graph. The teacher checks the answer.
7. If the student answers correctly, they flip their bottle or cup repeatedly until they land it upright. When they do, the next teammate can take their turn.
8. If the student's answer is incorrect, they must try another question card before they can attempt to flip.
9. The team's turn ends either when all members have successfully flipped their bottle/cup or when the timer reaches a set limit (e.g., 3 minutes).
10. Record the team's time or number of successful flips on the scoreboard.
11. Repeat steps 4-10 for each team. The team with the fastest time wins.

Questions Choose a question to ask the student who is about to flip their bottle

What is the title of the graph?
What is the title of the Y-axis?
What is the title of the X-axis?
What does each bar on the graph represent?
Which category has the highest value?
Which category has the lowest value?
How many categories are displayed on the graph?
What is the range of values shown on the Y-axis?
What is the total number of units represented by all bars?
What is the difference in value between the highest and lowest categories?
Are there any categories that have similar values to each other?
How does the value of one specific category compare to others?
What could be a possible reason for the highest value?
What could be a possible reason for the lowest value?
What trends can you observe from the graph?
How might this data be useful?
If you could add another category to this graph, what would it be?
How would you describe the overall distribution of data?
What insights or conclusions can you draw from this graph?
How might the information on the graph impact decisions or opinions?
